

Collapse Survival Institute Threat Assessment

The War on Iran significantly raises likelihood of a Collapse Disaster

The undeclared U.S. war on Iran risks catastrophic domestic attacks and Presidential Impeachment that could trigger civil war

Contrary to the President's repeated claims, the U.S.-Iran war has not resulted in the desired regime change, a successful popular uprising, or any Iranian willingness to surrender. Iran is very likely to hold out, with China/Russia/North Korea backing them, and Iranian leadership more motivated than ever to destroy the Great Satan.

Iranian agents in the U.S., possibly with the support of China/Russia/North Korea, may release a deadly virus, take down our vulnerable electric grid, or, with the aid of Artificial Intelligence, execute other attacks with Weapons of Mass Destruction. The Iranian commitment and capability to kill Americans has increased. Even relatively small attacks could spark panic and looting, with a breakdown in law and order spreading into a national collapse disaster. With the war dragging on, gas and food prices rising, and Trump's popularity continuing to decline, violent political protests and likely impeachment proceedings could push the divided U.S. into a form of civil war that could lead to a collapse.

The official U.S. intelligence community's *2025 Annual Threat Assessment* rates Iran's offensive biological weapons program as "very likely"; not a potential future, but a current threat. Iran's cyber threat to U.S. critical infrastructure is also a clear, current threat, with small cyber attacks already executed.ⁱ

STAT, a health-and-science news outlet warned that U.S. military strikes have likely destabilized Iranian dual-use research facilities (most notably the Pasteur Institute in Tehran) where pathogens are stored, raising the probability of accidental release or deliberate transfer to operatives. STAT condemned the lack of bio surveillance infrastructure to detect a novel or engineered pathogen quickly enough to contain it. They note that Iran "very likely" has a usable bio-weapons capability to use against us.ⁱⁱ The Bulletin of the Atomic Scientists warned that we do not have a reliable inventory of what biological and chemical materials are present at Iran's targeted sites.ⁱⁱⁱ A group of former U.S., U.K., German, and Israeli officials and intelligence professionals, United Against Nuclear Iran, cites evidence of Iranian bioweapons, and gives the obvious warning that the war against Iran and goal of regime change yields big incentives for Iranian Revolutionary Guards fanatics to launch bioweapons attacks on the U.S. homeland.^{iv} The Begin-Sadat Center for Strategic Studies, an Israeli national-security think tank, argues that with Iranian nuclear weapons at least temporarily stopped, an Iranian bio attack is their likely means of retaliation.^v

Since the U.S. war on Iran, the FBI has significantly increased surveillance of known or suspected Iranian agents, and warned of Iranian cyber and agent threats. The FBI Iran-threat page lists over a dozen Iran-linked plots disrupted on U.S. soil over the past five years.^{vi} A DHS Border Patrol memo warned that the activation risk of Iranian sleeper cells inside the U.S. “has never been higher.”^{vii} There were federal alerts circulated to law enforcement after U.S. intelligence intercepted an encrypted transmission “likely of Iranian origin” shortly after Khamenei was killed. Analysts described the transmission as the kind of message designed to deliver instructions to clandestine recipients without using internet or cellular networks, and characterized it as a possible “operational trigger” for sleeper assets outside Iran.^{viii} In a rare bipartisan warning, Senators Cotton (Senate Intel chair) and Gillibrand said Americans “have a right to be concerned” about Iranian sleeper cells.^{ix} *Homeland Security Today*, a publication for the homeland-security professional community, has criticized DHS for not issuing a formal National Terrorism Advisory System bulletin given the Iranian terrorist threat on U.S. soil.^x The threat is not just from Iranian agents, but the thousands of Chinese agents in the US, in every state, plus Russian, North Korean, ISIS, and Al-Qaeda agents who can assist Iran in executing terrorist attacks, including WMD attacks or large scale operations that could inflict severe damage.^{xi}

A small group of Iranian Revolutionary Guard jihadists have the capability to unleash a deadly virus with more devastating results than the worst Russian nuclear attack.^{xii}

The book *Preparing to Survive in the Age of Collapse* has an example of 30 Iranian terrorists spreading a virus in U.S. airports who, even with immediate CDC detection, could infect 5 million people within days and trigger a deadly pandemic.

The growing ease of genetically modifying bacteria and viruses presages real trouble ahead.

The Age of Designer Plagues

Drew Miller

BIOENGINEERING

The Age of Designer Plagues

DREW MILLER

The growing ease of genetically modifying bacteria and viruses presages real trouble ahead.

The world is likely entering the age of bioengineered viral pandemics and collapse—BVPC for short. New technologies like bioengineering enable terrorist groups, or even one dedicated individual, to modify and release new viruses that could cause both a pandemic and, as people react, a likely collapse in economic activity and possibly even of law and order. Many experts say natural or bioengineered viral pandemics (BVP) are inevitable as it becomes increasingly easier to modify an existing pathogen, making it more lethal and transmissible. Should there be a deliberately loosed pandemic, revolutionary changes will flood our economy, military, foreign policy; we will not live as before during the Age of Bioengineered Viral Pandemics and Collapse.

The CDC will detect spread of virus, but if natural or bioengineered virus with long period of contagiousness, too late to prevent pandemic

Example:

- Iran sends 30 terrorists to spread virus in airports
- Those exposed start spreading virus on 2nd day
- By end of 4th day: over 5 million people infected; likely in every city across the U.S.

Assume infectious for 4 days, disease doesn't manifest or too sick to go to doctor for 4 days	
30	Iranian martyr volunteers
50	# they infect per airport per 2 man team
15	# they infect on planes per 2 man team
60	# airports visited
60	# aircraft flights flown (travel in pairs)
3,900	# infected by martyr teams day 1
10	# each infected person infects on Day 1
3,900	# infected by martyr teams on their second day of travel
39,000	# day 1 infected people infect over Day 2
3,900	# infected by martyr teams on their 3rd day of travel
39,000	# day 1 infected people infect on Day 3
429,000	# day 2 infected people infect on Day 3
3,900	# day 4 infected people by martyr team (martyr team's last day; getting too sick)
39,000	# day 1 infected people infect on Day 4
429,000	# day 2 infected people infect on Day 4
4,719,000	# day 3 infected people infect on Day 4
5,709,600	Total people infected thru Day 4

- A bioengineered virus designed to cause bad pandemic might have a period of several days to spread disease before victims get sick enough to go to hospital, CDC detects

Source: Figure 8: Example of how a small terrorist group could infect 5 million people, from *Preparing to Survive in the Age of Collapse: Political, Military, Foreign Policy, and Preparedness Reforms Vital for Our Survival*, Dr/Col Drew Miller, 2026

Bill Gates, whose foundation is focused on world health issues, recently warned about pandemics, insisting, “we are absolutely not prepared.” Gates estimates “the chance of a natural pandemic in the next four years is somewhere between 10 and 15 percent. . . . And it'd be nice to think we're actually more ready for that than we were last time. But so far we're not.”^{xiii}

The former director of the Centers for Disease Control, no longer under political constraints, has defied the continued CDC lie that H5N1 is “low risk” to humans and has warned that an H5N1 pandemic is coming. Unlike the CDC, which completely ignores the deliberate human manipulation of H5N1 virus, former CDC Director Redfield also warned that “there is greater risk for the disease to be lab-grown.” Redfield noted that “against my recommendation, the scientists that did these experiments actually published them So, the recipe for how to make bird flu highly infectious for humans is already out there.”^{xiv}

We live in an era where not just countries like Iran or terrorist groups like Al Qaeda, but individuals can use cheap bioengineering technology like CRISPR or simple methods from U.S. funded, published, gain of function research, to develop deadly, transmissible viruses.

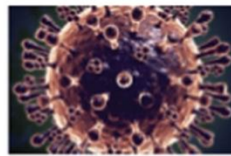

Ebola not a pandemic threat—but many existing and bioengineered viruses could cause disastrous pandemic

The destructive power of individuals continues to skyrocket, whether it's developing and releasing a deadly virus that kills billions, executing a cyber attack that takes down the electric grid, using AI to develop a new poison for municipal water systems or an easy way to build nuclear weapons. Individuals have unprecedented power to cause destruction and damage. And it's far easier to disrupt and cripple our complex, internationally interdependent, fragile economy than a local, agriculturally based one. If a major protest or looting surge overwhelms police, law and order can vanish.

New technologies and AI enabling massive destructive power of individuals —the key driver of the Age of Collapse

Source: Dr/Col Drew Miller, <https://www.collapsepreparedness.com>

A government trying to protect its citizens would be working to warn and prepare them to survive the inevitable H5N1 pandemic that is coming and other natural or bioengineered pandemics. Instead, the US government goes out of its way to assure citizens not to prepare or worry—insisting H5N1 is “low risk.”^{xv}

H5N1 used to be “bird flu.” But by early 2024, at least 50 mammal species had been reported infected by H5N1. Over the next year, between March 2024 and July 2025, 24 new mammal species were recorded as infected — nearly a 50% increase — bringing the total to 74 mammalian species known to be infected by H5N1. Mammals are now catching and spreading the virus directly to other mammals.^{xvi} When a virus infects mammals they serve as “mixing vessels” that help the virus find mutations that allow better transmissibility in other mammals—including humans. H5N1 and seasonal flu virus in a human provide a fantastic mixing vessel to help H5N1 mutate to a human-to-human transmissible variant. H5N1 is going to either naturally mutate to be human-to-human contagious (and may already have in some places), or will be bioengineered and manipulated to be human-to-human transmissible, as the former director of the CDC (no longer constrained by elected officials) has warned is even more likely.^{xvii} Scientists warn H5N1 bird flu is “completely out of control” globally, with the potential to spark a human pandemic. The virus has infected hundreds of millions of farm animals and established itself in unprecedented ways. H5N1 has a fatality rate greater than 50 percent, orders of magnitude deadlier than COVID-19 if human-to-human transmission develops.^{xviii}

Our government gave money to potential enemies like China to help them develop deadly new viruses. They lie about the inevitable H5N1 pandemic coming, partly due to this dangerous gain of function research, and refuse to warn or prepare Americans for this inevitable, potentially imminent, deadly pandemic and the collapse that will result. The subtitle of Dr. Redfield's recent book, "What I learned but cannot tell you," is also evidence of a key message we promote at the Collapse Survival Institute—government is **not** being honest with people, and is deliberately blocking warnings of pandemic and Artificial Intelligence, and other threats to our survival.

If Iran does not have a human to human transmissible version of H5N1 or some other bioengineered virus, or smallpox, that their agents can release in the U.S., we must expect that China, Russia, or North Korea might secretly provide it for them. Having Iran release the virus lets them escape risk of retaliation, unleashing a pandemic that could destroy U.S. power. Yes, a pandemic will spread around the world—but Iran (and North Korea, Russia) is already well cut off because of the war, and along with other countries, will immediately close their border at first reports of a deadly virus. China could provide Iran with a bioengineered virus that they have developed a vaccine for. As the virus spreads in the U.S., every country will cut off international travel. China could be among the first to close its borders, with a stockpiled vaccine standing by domestically should the virus reach Chinese soil. With the U.S. interfering in their unresolved civil war with Taiwan, pledging to defend Taiwan, China has huge incentives to help Iran cripple the U.S., eliminate U.S. support of Taiwan, and pave an easy path for China to be the clear world superpower.

Iran may target the highly vulnerable U.S. electric grid with physical and cyber attacks. Russia has demonstrated its ability to disable electric systems with cyber-attacks, and in 2023, a VP of the North American Electric Reliability Corp testified before Congress, warning of the "alarming" cybersecurity threat posed by China. Iran and North Korea also have cyber attack capability.

Some Iranian, Russian, Chinese, North Korean, and Islamic agents who operate in the U.S., try to blend in by working in normal jobs, sometimes in "front companies" they control. A March 2021 report from the U.S. National Counterintelligence and Security Center warned about insiders working in electric companies that could sabotage the grid, but there are few power companies with an insider-risk program and dedicated staff to detect and prevent such sabotage.

Iranian agents could execute physical attacks on the grid, shooting bullet holes in the huge, vulnerable transformers to destroy them—sometimes sending surges in electricity down the line that can destroy other transformers. In 2013 there was a sophisticated physical attack on the Metcalf station transformers in California. It was a coordinated 19-minute assault involving fiber-optic cable cutting and gunfire that damaged 17 transformers.^{xix} This was likely foreign agents doing the attack as a test on our vulnerability and their capability, but the government never determined who conducted the attack (or ones since) or ordered utility companies (controlled by government regulators) to harden or protect the grid. The 2022 Moore County, NC substation attacks, plus the 2022-2023 Pacific Northwest substation attacks (Oregon, Washington), demonstrate that physical attacks on the US grid are happening now.

Due to government incompetence or deception, we do not know if recent large scale drone reconnaissance, big drones releasing smaller drones, is also evidence of enemy agents developing and testing capability to attack our vulnerable grid, but only an idiot would assume this is unlikely. Our assessment is that China is wisely preparing the capability to destroy our

electric grid without providing obvious evidence that they launched the attacks. Cyber and physical attacks (from agents on the ground and drones in the air) can disable a large part or the vast majority of our electric grid, enabling China to seize Taiwan and replace the U.S. as the world's top superpower.

The FBI warned of an Iranian plan to use drones launched from ships to attack the U.S. Drone attacks on the electric grid are another means that Iran may leverage, and another area where Chinese agents and assets in country could assist.

In recent years, in addition to drone surveillance of military bases, drones appeared to be mapping electric grid stations. The FAA issued drone bans in New York and New Jersey that included limits over transmission lines and power substations. Large drones dispatching smaller drones with explosive charges could easily destroy a large number of transformers. The leading companies in drone taxis are Chinese—and they operate in the U.S. There is good reason to suspect that some of the aggressive drone activity in the U.S. in recent years is coming from Chinese air taxi drone companies, using this business as a front to prepare for drone attacks on the electric grid.

**COLLAPSE SURVIVAL INSTITUTE**

Chinese Air Taxi companies in U.S. could be used to release drones to destroy electric grid transformers

UNBOX FACTORY

China Flies World's First 16-ton Drone Mothership That Can Launch Swarms Mid-air

Source: Collapse Survival Institute, “The U.S. Electric Grid is Very Fragile and Vulnerable Government Knows—but does nothing to warn or prepare citizens,” video briefing, <https://www.youtube.com/watch?v=u-breS84fSA&t=62s>

Drones are ideal vehicles to place small charges to attack advanced aircraft on the ground (that cost millions of dollars each, and are very few in number as a result)—or destroy huge transformers to take out our electric grid. A massive drone attack on military bases and/or the electric grid would take extensive reconnaissance and mapping for a large fleet of drones to execute a big attack—activity that has occurred across the US over the past year.

While the electric grid is huge and there are millions of transformers and electric nodes and stations in our grid, there are some especially critical nodes, such as the 700 extremely high voltage (EHV) transformers that carry electric power (most of it) over long distances. There are nodes that connect with many other parts of the grid and enable power surges to spread to other transformers. With big, air-taxi size “mothership” drones dispatching lots of smaller drones carrying small explosives that can land on exactly the most vulnerable part of a huge transformer, and hundreds of agents on the ground shooting at or planting explosives to take out transformers, the task of destroying the U.S. electric grid for years, killing the majority of our population and taking our conventional military forces out of action is very doable—and deniable.

In March 2026, the Department of Homeland Security urged U.S. energy companies to increase security in response to potential threats from Iran, including drone attacks on the electric grid. A Center for Strategic and International Studies report warned that, “and pro-Iranian entities within the United States have capabilities to use drones as weapons—a threat that is difficult for utilities to counter.”^{xx} The North American Electric Reliability Corp. also issued a report warning of “growing concern” about drone attacks.^{xxi}

Destroying our vulnerable electric system is the obvious, easy way to disable our military and kill most of our citizens. Foreign agents working undercover in electric utility companies, Chinese agents hiding/operating in Chinese air taxi drone companies to launch drone attacks on transformers, along with attacks by small Chinese agent teams on key substations and transformers could enable China to destroy the electric grid, cripple the US military, and kill most of us.

Without power, it’s not just economic production that shuts down. Municipal water systems can’t function without electricity for pumps, so urban and suburban residents, the vast majority of our population, have 3 days to find alternative, safe drinking water or they start dying. U.S. military bases (with very limited exceptions, largely our strategic nuclear forces), cannot operate without the civilian electric grid. Take down the electric grid and U.S. military power is largely eliminated and if the power is not back soon, off for a year or more; most citizens could die.

The co-chair of the commission charged by Congress to study electric grid vulnerability was asked during Congressional testimony, “what happens to society when the grid is down for . . . a year or two, because we cannot get these transformers?” The co-chair of the Commission, former CIA Director James Woolsey, replied, “there are essentially two estimates on how many people would die from hunger, from starvation, from lack of water, and from social disruption. One estimate is that within a year or so, two-thirds of the United States population would die. The other estimate is that within a year or so, 90 percent of the U.S. population would die. We are talking about total devastation.”^{xxii}

If any doubts about how vulnerable our electric grid is, watch this professional, award winning documentary:

<https://griddownpowerup.com/>

As of early April, six federal agencies jointly attributed disruptions across U.S. Government Services and Facilities, Water and Wastewater Systems, and Energy sectors since March 2026 to Iranian cyber attacks.^{xxiii} The Center for Strategic and International Studies concluded that the U.S. electric grid, with over 7,300 power plants and 600,000 miles of high-voltage transmission lines, is now treated as a primary Iranian target.^{xxiv}

We cannot assume that Iran has no ability to use a nuclear weapon (it only takes one or two) to destroy the U.S. electric grid. Even if the Trump Administrations' claims that Iran's nuclear weapons program was completely destroyed is true, and their enriched uranium is buried underground, former National Security Advisor John Bolton has warned that Iran may have contracted with North Korea to have nuclear weapons produced.^{xxv} Nor does Iran need an ICBM to conduct a high altitude EMP attack to destroy our grid. The threat of Scud missiles launched off ships off our coast is not the only clever way to use these short range missiles. A civilian airliner modified to launch a scud missile with a small nuclear device over the U.S., to reach a higher altitude (more effective for a grid attack) is another way to destroy the grid and not leave a missile trail back to the launching country.^{xxvi} North Korea's nuclear weapons were designed with Russian assistance to be optimized to produce EMP, not blast, since the U.S. electric grid is our obvious vulnerability, the easy way to disable the U.S. military and kill most of the population with a few high altitude detonations.^{xxvii} Russia, China, North Korea, Iran, all know that the U.S. Achilles' heel is our vital, fragile, vulnerable electric grid. Iranian military documents describe nuclear EMP attack scenarios against the United States.^{xxviii}

The Congressional EMP Commission, including Chairman Dr. William Graham and experts Peter Pry and former CIA Director James Woolsey, estimated that a year-long power grid collapse could result in 90 percent of the population dying from starvation, disease, and societal collapse.^{xxix} This was a commission of the leading experts, tasked and funded by Congress to report on whether our electric grid was a big vulnerability. Their answer was a loud and clear: yes, and it must be hardened immediately. Congress did nothing because they get big donations from utility companies that oppose hardening, and the career politicians fear loss of votes from higher electric bills if the grid gets hardened.^{xxx}

Iran does not need to take down most of the U.S. electric grid to trigger panic, loss of law and order, and a nation-wide collapse. With the complete lack of any U.S. civil defense program, a population that is well aware of how store looting can quickly escalate to home marauding and collapse of law and order, millions of Americans already planning to start looting when any big disaster strikes, even a small Iranian grid attack could yield a nationwide panic, looting takes off, and law and order vanishes. There are a million gang members who know that any big panic or protest or disaster that ties up police makes it a great time to start looting. Tens of millions of preppers also expect that law and order will quickly break down at the first news of a pending collapse disaster. The popular *Walking Dead* TV series educated (and for some motivated) tens of millions more about the need to steal food, be ruthless, kill to survive, when law and order vanishes.

If the grid goes down you can't operate a jail—and any collapse disaster that leads guards to stay at home to protect their families, or avoid getting attacked by marauders, will not come to work. The two million Americans in jail (the U.S. has the largest prison population in the world, and the highest per capita rate of imprisonment of any country) are completely unprepared for a collapse, and will be skilled marauders in a collapse when they are released or break out of jail. Yet another aspect of collapse preparedness that the government won't even talk about, and does nothing to mitigate. Every government civil defense and "Continuity of Government" program is focused on saving top government officials. Not only is there no concern for the public, but Executive Orders actually authorize government agencies to steal resources from the private sector when the government wants them for its Continuity of Government priorities.^{xxxix}

The probability of a collapse disaster in the U.S. was already high, and increasing due to the growing ability of individuals to create Weapons of Mass Destruction aided by bioengineering and Artificial Intelligence. The "Probability of Collapse Model" roughly estimates the likelihood of a collapse disaster. Most of the "trigger events" that could yield a collapse are highly uncertain, and have no past statistical record for an estimate, so experts are asked to estimate the likelihood of both the trigger event occurring and then whether or not it could escalate to a collapse level disaster. A severe disaster may occur but not have widespread impact, may not escalate into a collapse level disaster. This model weighs both the probability of the initial trigger disaster event occurring, and then the likelihood of it spreading in coverage area and escalating to a collapse level disaster where economic activity largely ceases, and there is widespread loss of law and order, society breaks down. We cannot calculate the probability of a collapse from past occurrence data, but by assessing the risks, talking to experts, this model estimates a reasonable range of annual probabilities of a collapse occurring.^{xxxix}

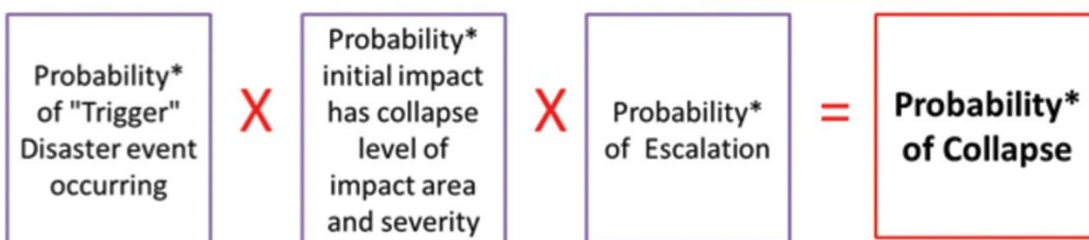

The 2025 update of the Probability of Collapse model yielded an estimate of a 16-57% annual chance of a collapse disaster in the U.S. The likelihood is highly uncertain, but it is definitely not low.

Disaster Preparedness Threat Watch and Collapse Warning System “Probability of Collapse model” estimates annual likelihood of a Collapse

Presented at Military Operations Research Society Symposium by Dr. Drew Miller

“Probability of Collapse” model currently estimates **16-57% annual chance of collapse**

* - No statistically valid way to estimate. Probability could be much higher!!

Source: Figure 14 in *Preparing to Survive in the Age of Collapse: Political, Military, Foreign Policy, and Preparedness Reforms Vital for Our Survival*, Dr/Col Drew Miller, 2026

This high estimate of collapse disaster is surprising to Americans because there are not only no warnings from government, but assurances that “inevitable” risks like an H5N1 pandemic are “low risk” and that war with Iran is not likely to yield a large scale physical attack on the U.S. Government lies about threats for the reasons listed in this exhibit below:

**Figure 18: Why isn't the Government Warning us of Collapse Threats
or Making Preparations to Protect Citizens?**

1. Career politicians are focused on reelection, not your survival prospects
 - Big businesses and lobbyists own career politicians
 - No reelection votes, special interests or lobbyists pushing for preparedness
 - If they vote for preparations and attack doesn't come—might lose votes for "wasting money" or "crying wolf"
2. Government officials want a dependent public that follows their direction and trusts them to know what's best, will protect them
 - Don't want to panic the public
 - Don't want to look ineffective
 - Prefer a dependent, docile citizenry to well-prepared citizens
3. Elected officials don't want the public to know that they are not protected, not safe
4. Preparedness requires weapons—Democratic Party champions gun control and wants to outlaw "military capable" weapons that are vital to fend off marauder groups in a collapse
5. Improving security requires getting rid of thousands of government regulations banning woodstoves, stockpiling antibiotics, zoning and building codes that block survival facilities
6. Government officials will be protected in a collapse at Mount Weather, Raven Rock, and other FEMA and military survival facilities
7. Most congressmen are lawyers or career politicians with no foreign policy or national security experience, nor expertise or interest in security

Source: Figure 18 in *Preparing to Survive in the Age of Collapse: Political, Military, Foreign Policy, and Preparedness Reforms Vital for Our Survival*, Dr/Col Drew Miller, 2026

Shortly after the February 28 U.S.-Israeli strikes on Iran began and the killing of Supreme Leader Khamenei, a Department of Homeland Security bulletin warned of potential lone-wolf and cyberattacks, but assessed that "a large-scale physical attack is unlikely."^{xxxiii}

The probability of collapse model has a very wide range of likelihoods, 16 to 57%, because most collapse triggers are unpredictable, highly uncertain. DHS announcing low risks of Iranian domestic attacks is driven by sycophantic support of the President, not honest threat assessments. First, we cannot know how many Iranian agents are in the country. Confidence in our ability to identify or keep track of foreign agents is extremely low.^{xxxiv} In another amazing display of Trump Administration dangerous incompetence, days before U.S. strikes on Iran, FBI Director

Kash Patel fired a dozen agents and staff from CI-12, the Washington, DC-based FBI counterintelligence squad responsible for tracking foreign spies operating on U.S. soil and handling espionage threats from Iran. Fired personnel included the section chief in counterintelligence who handled Iranian threats. They were not fired for incompetence, but political retaliation: each of the agents had been involved in the Mar-a-Lago classified documents investigation—a clear, gross violation of handling classified information that would land an intelligence officer or government employee in jail, but has no penalties for top elected officials.

A second reason the DHS claim of low risk of major Iranian domestic terrorist attacks is nonsense is that even if Iran lacks big attack capability, China, Russia and/or North Korean agents in country could covertly assist Iranian agents here. Russia is known to be providing intelligence to Iran on U.S. targets in the Middle East, and could quietly assist them in domestic attacks. Trump's attacks on Iran and Venezuela and threats to Greenland and Panama are all fantastic for China—undermining U.S. respect and allied support, and making violent resolution of their unfinished civil war with fellow Chinese on Taiwan look relatively respectable. China should be expected to leverage the U.S. war on Iran as an ideal means to harm the U.S. without attribution or punishment. China (and Russia) can covertly help Iran with cyber attacks on the U.S. grid, and advise on physical attacks as well.

A third reason to condemn DHS's false assurance of low risk is that we know Iran has a bio weapons program, and it would be more surprising if they refused to release a virus in the U.S. to punish and kill "the Great Satan." If Iran does not have the current capability to release a highly lethal/transmissible H5N1 or bioengineered virus in the U.S., we should again expect China and Russia to assist. It's a fantastic set up for China/Russia to deliver a knock out blow to the U.S., promote their objectives with Taiwan/Ukraine, and blame Iran for the bio attack. Indeed, it's likely Iranian leaders would gladly claim responsibility for the release, not deny blame.

In his second term, Trump has put unqualified sycophants in top military and intelligence positions, just as willing to lie as Trump, never questioning or challenging him, doing all they can to suck up to Trump and avoid getting tossed out—regardless of the risk to citizens.

Article I of the Constitution exclusively vests in Congress the authority to declare war, while Article II designates the President as commander in chief. Nor does the War Powers Resolution authorize Trump's war on Iran unless there is: (1) a declaration of war by Congress, (2) specific statutory authorization, or (3) a national emergency created by attack upon the United States. None of these are present.

The President and his sycophantic, unqualified Secretary of Defense have no case for arguing imminent threat since they brag about obliterating Iran's nuclear weapons capability with attacks last year and claim their goal in this war is recovering buried nuclear material. There is absolutely no "imminent" threat of Iranian nuclear weapons use. Nor would such a threat fit with the targets bombed in Iran and attacks on civilian infrastructure.

When the President of the United States launches an offensive war, without the consent of Congress, in direct violation of the Constitution, with such clear threats to completely unprepared citizens with known vulnerabilities that could kill 90% of the population, he has committed an irresponsible, impeachable offense. As this war drags on without U.S. success or

Iranian capitulation, the odds of impeachment grow-- and with it a debate that could tear the country apart.

The constitutional grounds for impeachment include "high crimes and misdemeanors," which encompass abuse of power and conducting oneself in a manner incompatible with the purpose and function of office. Beyond violating the Constitution by waging an undeclared war, initiating war while knowing of confirmed domestic terrorist networks poised to activate, the bioweapon risks from a country just assessed by the Intelligence Community as having an active program, with critical infrastructure vulnerabilities that could kill 90% of Americans, constitutes reckless endangerment of the population and gross abuse of presidential power.

Trump's threats to "bring Iran back to the Stone Age" and targeting of civilian infrastructure adds another powerful impeachment argument based on violations of international law and Constitutional obligations. Over 100 international law experts from Harvard, Yale, Stanford and other institutions signed an open letter warning that intentionally attacking civilian infrastructure is prohibited by the Geneva Convention and is a war crime.^{xxxv} The Constitution makes treaties "supreme law of the land" (Article VI). The Geneva Conventions, ratified by the United States, create binding legal obligations that presidents must uphold; violating them is a breach of the presidential oath to "faithfully execute" the laws.

This combination of Constitutional violations and bad acts creates an exceptionally strong impeachment case:

1. War Powers violations (waging war without Congressional authorization)
2. Starting a war despite known domestic vulnerabilities (Iranian terrorist agents, bioweapon risks, grid vulnerability) and unpreparedness
3. Violation of international law, U.S. treaties, war crimes

Each element reinforces the others, showing a pattern of reckless disregard for constitutional constraints, legal obligations, and American lives.

House Resolutions to impeach Trump for violating the Constitution in waging war without Congressional authorization have already been introduced. As Trump's approval ratings continue to fall, now in the 30s (Nixon fell to 24% just before resigning), more of his supporters will turn on him, as Congresswoman Greene, Tucker Carlson, Megyn Kelly, Joe Rogan, and some GOP Senators have.

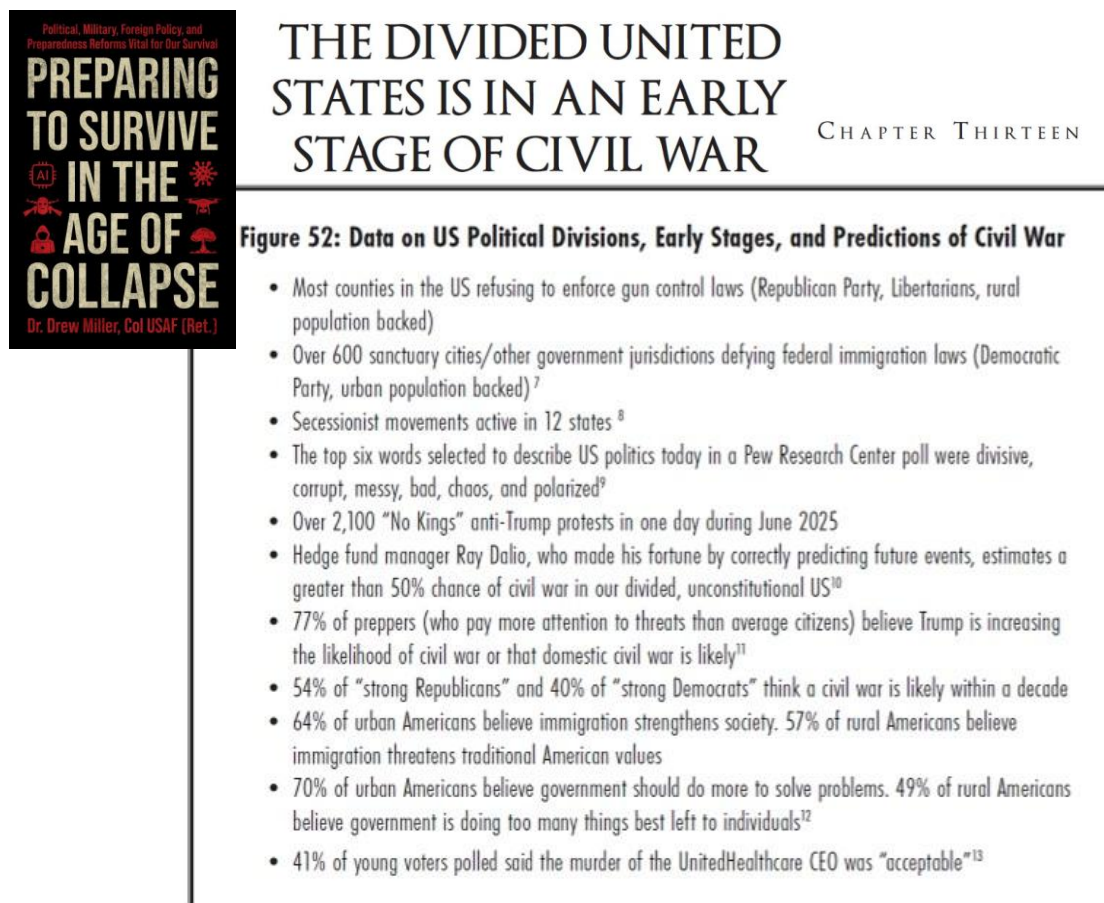

As the war drags on, the flagrant abuse of presidential authority, violations of the Constitution and international law, and plummeting public support for Trump will probably lead to impeachment proceedings against Trump moving forward—adding yet another trigger event that could lead to a collapse: civil war as the divided U.S. breaks into political violence.

Trump supporters will counter with sound arguments that it's the Democratic Party, starting with FDR, that trashed the Constitution and eliminated the key limits to government power the American Revolution was fought for. The unconstitutional, divisive social programs that FDR and the Democratic controlled Congress passed, the Supreme Court rightly ruled unconstitutional until the 1937 Helvering case when the Court surrendered to threats from FDR and effectively, illegally, erased the 10th Amendment which strictly limits the federal government to only act in areas authorized in writing in the Constitution. FDR then appointed Democratic Senators to the Supreme Court and the 9th Amendment, the guarantee of all Natural Rights (private property,

privacy, self-defense, the right to be left alone), was similarly lost from the Constitution without amendment or even public awareness of what had happened.^{xxxvi} The two key limits to Big Government abuse of power in the Constitution were erased due to the Democratic Party's lust for unlimited government power.

The divided United States of America are very well set for political violence and civil war. Ray Dalio built one of the largest and most successful hedge funds in the world by correctly predicting future events that others didn't want to think about. He believes the United States is in a "pre-breakdown" phase, with huge national debt and a highly divided, increasingly hostile political divide. The next stage is civil war and revolution.^{xxxvii} Dalio predicts that the probability of "some form of civil war" in the U.S. is greater than 50%. Not a clash of states, but escalating social violence, state-vs-federal defiance, societal fragmentation.^{xxxviii}

There is already evidence of early stages of civil war actions and sentiments in the U.S., listed in the exhibit below:

Source: Figure 52 in *Preparing to Survive in the Age of Collapse: Political, Military, Foreign Policy, and Preparedness Reforms Vital for Our Survival*, Dr/Col Drew Miller, 2026

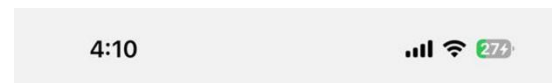

Intelligence agencies like the CIA have models of "political instability" that help us estimate when third world countries may be facing crises or revolutions. The U.S. today scores as politically unstable, vulnerable to civil war or political violence. Barbara Walter, who has

worked with these intelligence agency political instability models, believes that “conditions in the US have worsened with a drastic decline in the quality of the [democratic] system. It’s happening quickly . . . and everything indicates that the president wants to weaken it further. If he can, he will eliminate the checks and balances on the executive branch. I can imagine a scenario in which he’s successful in creating a dictatorship.” Walter warns that the US is not just scoring in a zone with risk of civil war, but we are at a point where if conditions worsen, “you get there very rapidly.” Walter does not believe it will be a civil war between armies, but rebel groups fighting and killing at local levels.^{xxxix}

This will not be war amongst states, though some states may secede. It will be violence largely within states splitting apart as disgusted rural, conservative counties reject unconstitutional laws forced on them by the Democratic party in urban voter dominated states like California, Nevada, Colorado, Illinois, Minnesota, Virginia, New York, and Massachusetts.

To answer the question of what kind of civil war violence may result, intelligence officers and analysts working with the “Collapse Survivor App,” studying reports from Dalio, experts who have worked on political instability models, with people playing the military style exercise simulation polled about what kind of violence they expect to result. The expectation is rural conservative counties rebelling against liberal state governments they believe are violating their “Natural Rights” as Americans to be left alone, protected in the U.S. Constitution by the 9th and 10th Amendments (which the Supreme Court no longer enforces). In Democratic controlled state governments including California, Oregon, Nevada, Colorado, Illinois, New York and Massachusetts, rural, conservative counties expanded their current rebellion against state gun control laws to include kicking state government officials out of their counties and refusing to follow zoning and building code laws forced by urban-dominated state governments into rural counties that oppose such rules. The exhibit on the right shows one of the “exercise message traffic” items from this simulation.^{xl}

This type of protest violence leading to looting has occurred in recent years in places like Portland, Oregon, but may happen on a far wider scale post election. A major training lesson from the Collapse Survivor App exercise simulations, is that when

< Scenario 16

S16 S067

EXERCISE, EXERCISE, EXERCISE

Several northeast California counties have started demolishing state offices in their county. The practice quickly spread to Nevada, Oregon, and several other states. In Oregon, several people and LEOs were shot when a gunfight broke out.

EXERCISE, EXERCISE, EXERCISE This is a simulated, scenario message, not actual

Source; Message traffic item from a collapse survival training exercise on the Collapse Survivor App, Civil War scenario

police are overwhelmed with protestors, criminals and gang members can exploit this as a great opportunity to loot, and law and order can quickly vanish.

Source: Figure 13 in *Preparing to Survive in the Age of Collapse: Political, Military, Foreign Policy, and Preparedness Reforms Vital for Our Survival*, Dr/Col Drew Miller, 2026

The DHS assurances that Iran is unlikely to launch a major domestic attack in the U.S. should not be respected. We cannot know how many Iranian agents are here, whether or not they have viruses they can release, or plans for physical attacks on the electric grid. We must assume they can receive some support from China/Russia/North Korea, providing them a deadly virus, or having some of their agents in the U.S. assist in attacks. Iran's motivation to kill Americans has likely increased, and it is highly likely that they will attempt deadly attacks, employing WMD. There will be increasing protests over higher gas and food prices that provide opportunities for looting that can spiral out of control. With the war dragging on and Trump's popularity continuing to decline, protests against Trump will increase and impeachment proceedings are likely to move forward, which could lead to political violence, even some form of civil war that could lead to a collapse.

The Collapse Survival Institute was formed to help sound the warning since our Government is irresponsible, self-serving, and not preparing citizens for collapse survival.

Julia Shapero, “Number of Russian spies in U.S. remains ‘way too big,’ says FBI director,” The Hill, Sep 8, 2023, <https://thehill.com/policy/national-security/4194044-fbi-wray-russian-spies-us/>

The FBI and intelligence officials have been providing limited warnings about the growing terrorist and other threats to the US, but usually prefer to avoid alarming the populace or making elected officials look bad, so they understate the risks. Former officials are giving far more detailed and honest threat warnings.

In recent years tens of thousands of illegal Chinese immigrants, many young males, entered the U.S. illegally. Many are believed to be Chinese agents. Via other sources we know that the FBI has warned that China has safehouses for their agents in every state.

We can’t know their numbers, but it is likely several thousand. Some evidence of their presence is the 224 reported instances of Chinese espionage in the United States since 2000 —but this does not capture the likely far more numerous cases of undetected espionage or agents that are not risking discovery by engaging in espionage, but working in a “normal” job, waiting for future assignment.

A recent FBI Director called the number of Russian spies in the U.S. “way too big” despite efforts to find them, but the FBI does not provide an estimate of their number.

There is an estimate of the number of ISIS members in the U.S.: over 1,000, in all 50 states. Since 2014, more than 250 individuals have been charged with ISIS-related activities.

Sarah Adams, a former CIA counter-terrorism analyst, who continues to access vast open-source material, recently warned that Al Qaeda is in the operational phase of a plan to attack the US, both our Embassies abroad and coordinated attacks inside the U.S. itself. According to Adams, Al Qaeda has trained about 1,000 operatives to carry out attacks. A large portion of Al Qaeda agents infiltrated through our largely open northern and southern borders, but they also use legal methods of immigration. More details are available by watching the Dec. 12th episode of the Shawn Ryan show:

<https://www.youtube.com/watch?v=T50pRCNaQCA>

We don’t have any reliable information on the number of Iranian and North Korean agents in the US, likely relatively few. Would they coordinate with Russia and Chinese agents? Unlikely due to security concerns, but if there is a major attack on the U.S. by foreign agents that severely damages our electric grid (the likely target), they will probably tasked to take advantage of U.S. disruption and widespread loss of law and order, to undertake attacks.

^{xiii} Bill Gates, quoted in Business Insider, Jan 2025, <https://www.businessinsider.com/bill-gates-next-pandemic-covid-lessons-2025-1>

^{xiv} Former CDC Director Robert Redfield, quoted in Lauren Irwin, “Former CDC director predict bird flu pandemic,” The Hill, June 15, 2024

^{xv} The CDC does not admit these facts in its H5N1 warnings:— Emerging Infectious Diseases article, “Recent Changes in Patterns of Mammal Infection with Highly Pathogenic Avian Influenza A(H5N1) Virus Worldwide, March 2024

- Mammals that used to catch H5N1 only from contact with infected birds, now are getting H5N1 from other mammals—the virus has mutated to spread in mammal populations
- “H5N1 has affected several mammal species since 2003, thus raising concern because H5N1 mammalian adaptation could represent a risk not only for diverse wild mammals but also for human health.”
- “During 2003–2023, a total of 878 humans tested positive for the H5N1 virus, and 458 deaths were reported, indicating a lethality of ≈52%”
- “Mutations in the virus found in diverse mammal species, especially in the current panzootic, are of great concern. For instance, the T271A mutation reported in minks in Spain is also present in the H1N1 that produced a pandemic in 2009. . . . Moreover, some infected species, such as minks, may act as a mixing vessel for interspecies transmission between birds, mammals, and humans.”

Many biologists are warning that we face an inevitable H5N1 pandemic, that could start now. The Dec 2024 issue of Science magazine noted, “No clear human-to-human transmission of H5N1 has been documented yet, but ‘this feels the closest to an H5 pandemic that I’ve seen,’ says Louise Moncla, a virologist at the University of Pennsylvania. ‘If H5 is ever going to be a pandemic, it’s going to be now,’ adds Seema Lakdawala, a flu researcher at Emory University.” — <https://www.science.org/content/article/why-hasn-t-bird-flu-pandemic-started> The CDC is working to get early detection of H5N1 cases in humans in hospitals in hopes they can limit the spread of the virus; hence the January 2025 press release encouraging hospitals to expedite testing and reporting of H5N1 cases. The press release also mentioned CDC investments in a vaccine that would work for H5N1, though as H5N1 continues to mutate, or is deliberately bioengineered, we cannot be certain if a vaccine would work (just as seasonal flu vaccines often do not work)—or whether or not it is safe, does not have serious bad side effects. In effect, the CDC admits that they are preparing for an H5N1 pandemic, but the CDC still continues its big lie of calling H5N1 “low risk.” The CDC knows that a H5N1 pandemic is coming, inevitable—but does not honestly admit this or warn the public. They continue to broadcast the lie that H5N1 is low risk.
